

Current Mitigation Infection Control Practices 9.8.2021

- Staff and residents are tested for COVID-19 at the rate recommended by CMS. This rate is dependent on several factors – county positivity, positivity among residents and staff and vaccination status. If there have not been any new COVID infections in residents or staff members, only unvaccinated staff members are tested routinely. Residents are tested if they frequently leave the building for physician or other appointments and/or if they are having any signs or suspicions of illness.
- Staff continue to regularly monitor residents for any signs or symptoms of illness, including temperature, vital signs, etc.
- Our visitation policy is posted on our website at www.sunriseretirement.com. We are pleased to have been able to accommodate so many friends and families in the facility but must request that everyone follow the visitation policy carefully. Exceptions are that we are not asking for appointments at this time nor are we able to provide testing to guests. With the Delta variant causing breakthrough cases of COVID-19, it is imperative that we continue to be very careful about following hygiene and mask wearing. Also, as a family member or friend of someone who is in a high-risk category – please consider signing up for the vaccine as soon as possible.
- Sunrise Retirement Community will continue to enforce mask wearing for all staff members, visitors, contractors, and residents (as tolerated, when out of their own room) on campus. The nursing facility's regulations have not been relaxed and mask wearing is still recommended for all congregate settings in order to minimize the potential spread of the coronavirus.
- Nursing & assisted living staff members must screen for exposure, symptoms and temperature at the beginning and end of each shift. They must also wear appropriate personal protective equipment (PPE).
- Sunrise has increased cleaning & disinfecting of surfaces throughout the building.
